agenda

OpenEarth regularly holds *sprintsessions*. These are informal hands-on meetings where we interactively share knowlegde, models, ideas and tools. A second goal is to obtain feed-back on the OpenEarth infrastructure. During these sessions we edit the wiki, update stuff into SubVersion, put data into netCDF files and upload to the OPeNDAP server, and PostgrSQL/PosGIS, upload static Google Earth feeds onto the kml server and con figure geoserver to provide live WFS/WMS/KML streams.

Sprint sessions are organized regularly in different frameworks. Because of the open mindset of OpenEarth participants from outside the framework can always join. Feel free to organize a sprintsession yourselves, or ask us to organize one if you can team up say 10 enthusiasts. Our sprintsessions are posted on (i) our LinkedIn group and (ii) as a news/blog item on this wiki space. For reference please find below a list of historic sprint sessions.
