II. Methodology:

Risk-based Forecast system Manila

III. Results & Conclusion:

Understanding of Flood Forecast

Deltares

I. Ensemble Generation (including probabilities)

II. Typhoon wind velocities

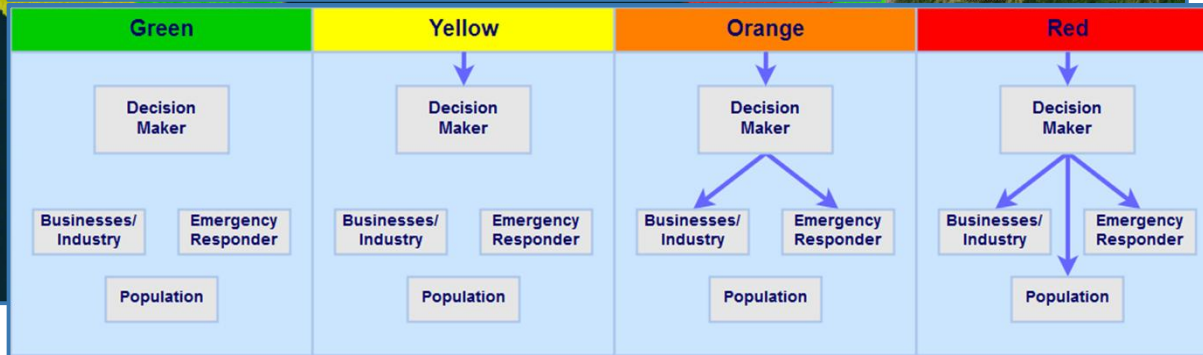

III. Maximum Water depth

IV. Impacts for every Ensemble Member

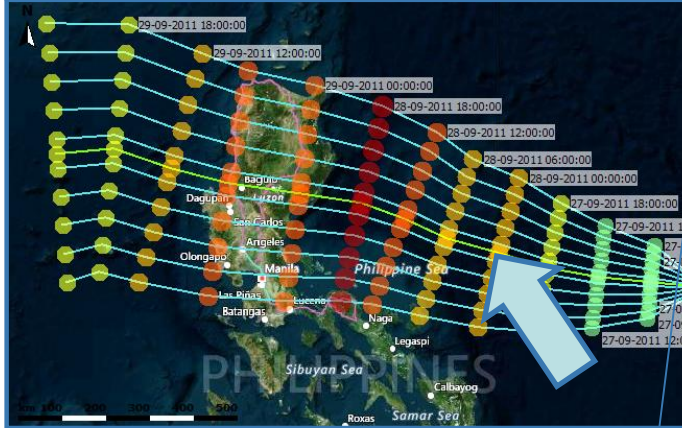

V. Impacts x Probabilities = Risk

VI. Categorization

VII. Information distribution schema

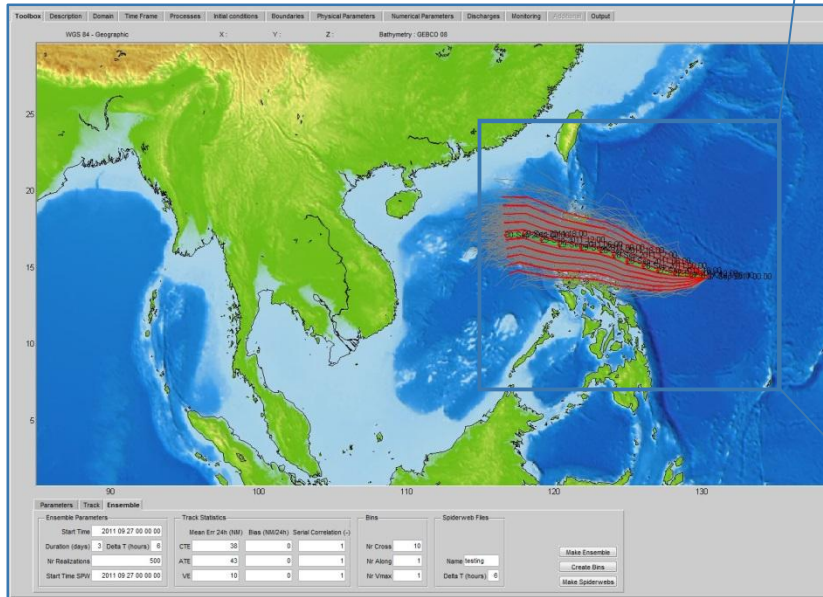

Ensemble Generation (including probabilities)

Forecast Pathway from Joint Typhoon Warning Center (green)

500 individual ensemble members (grey) binned into 10 representative tracks (red)

(Advanced Tropical Cyclone Toolbox, DDB)

Chronic of Forecast

Methodology

Results & Conclusion

Deltares

Forecaster's Compass

Probabilistic Forecast:

Number of simulations: 10
Grid resolution: 100m x 100m
Runtime per track: ~ 20 min

Good Decision Making

**Modelers frequent feedback needed
for the application in forecasting!**

High Modell
Refinement

High Number of
Simulations

Deterministic Forecast:

Number of simulations: 1
Grid resolution: ~15m x 15m
Runtime per track: ~ 4 h

Database Option:

Number of simulations: flexible
Grid resolution: flexible
Runtime per track: flexible

Long
Modell
Runtimes

Risk-based Forecast System Manila

III. Results & Conclusion:

Understanding of Flood Forecast

Comparison Risk Map & Categorization Map

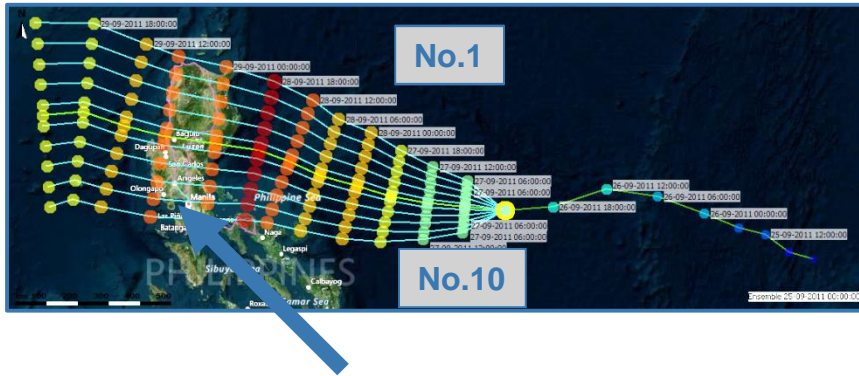

Number of people affected of a water level higher than 0,2 m per km²

Chronic of Forecast

Methodology

Results & Conclusion

Deltares

What is the benefit of the risk dimension?

Risk Map

Metro Manila, Mall of Asia, Risk of Immobile damages, 00:00 27.09.2011 GMT 00:00 27.09.2011

Immobile Damages:

Metro Manila, Mall of Asia, Immobile damages, Ensemble No.1, 00:00 27.09.2011 GMT 00:00 27.09.2011

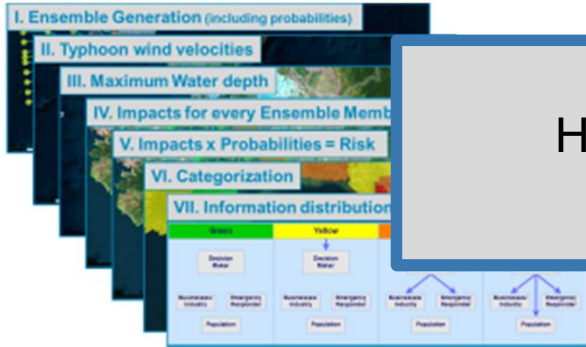

Metro Manila, Mall of Asia, Immobile damages, Ensemble No. 5, 00:00 27.09.2011 GMT 00:00 27.09.2011

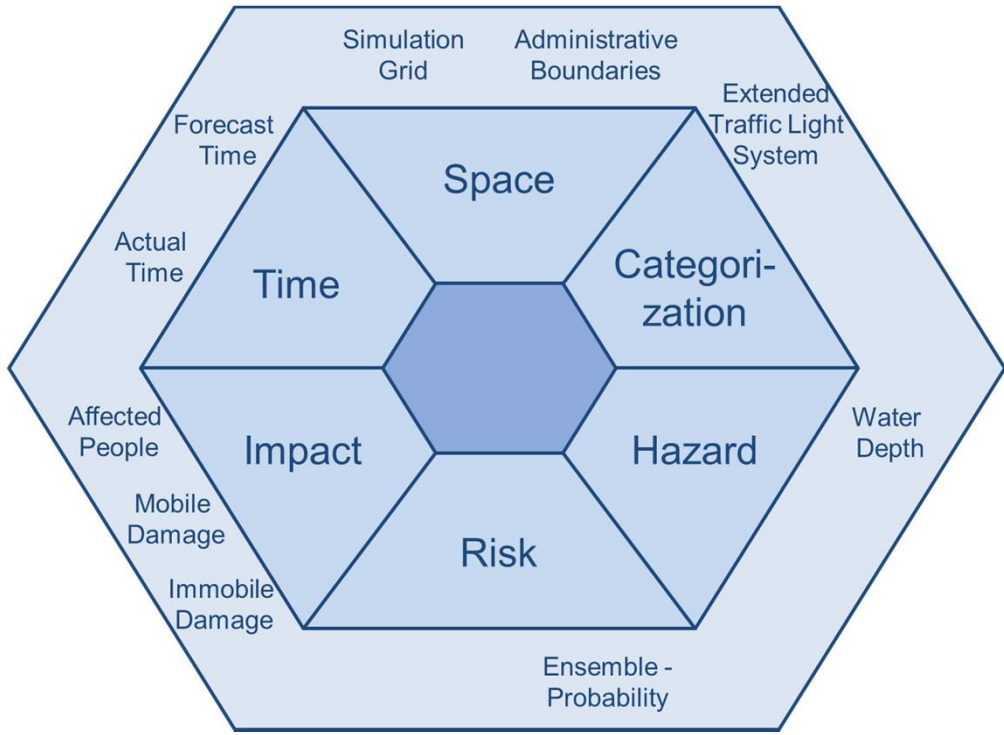

Metro Manila, Mall of Asia, Immobile damages, Ensemble No.10, 00:00 27.09.2011 GMT 00:00 27.09.2011

Deltares

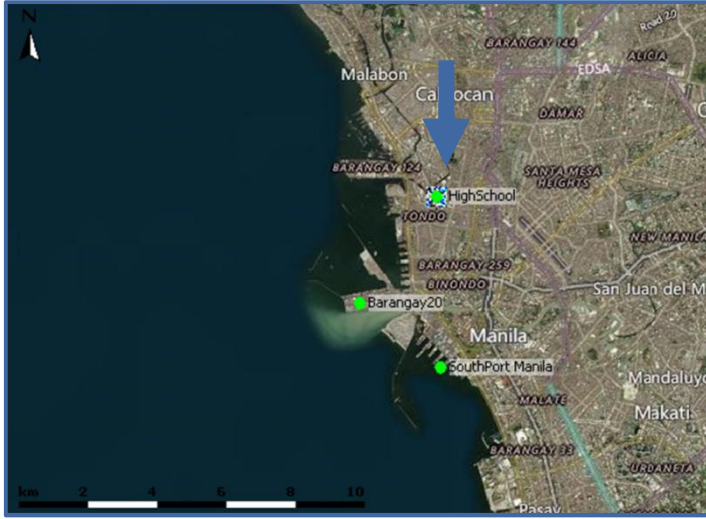

Problem:
How to display the results of the multidimensional system?

Dimension Board:
Method to display and simplify the output of RBF

Headmaster

Scenario:

The headmaster of school in Manila hears about a Typhoon warning. The school frequently faces problems with flooding.

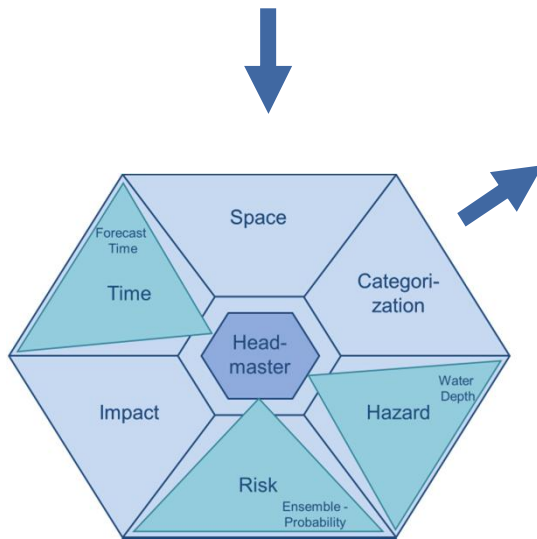

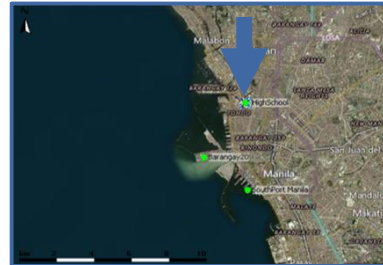

The Headmaster

“What is the worst case for my school in the upcoming three days?”

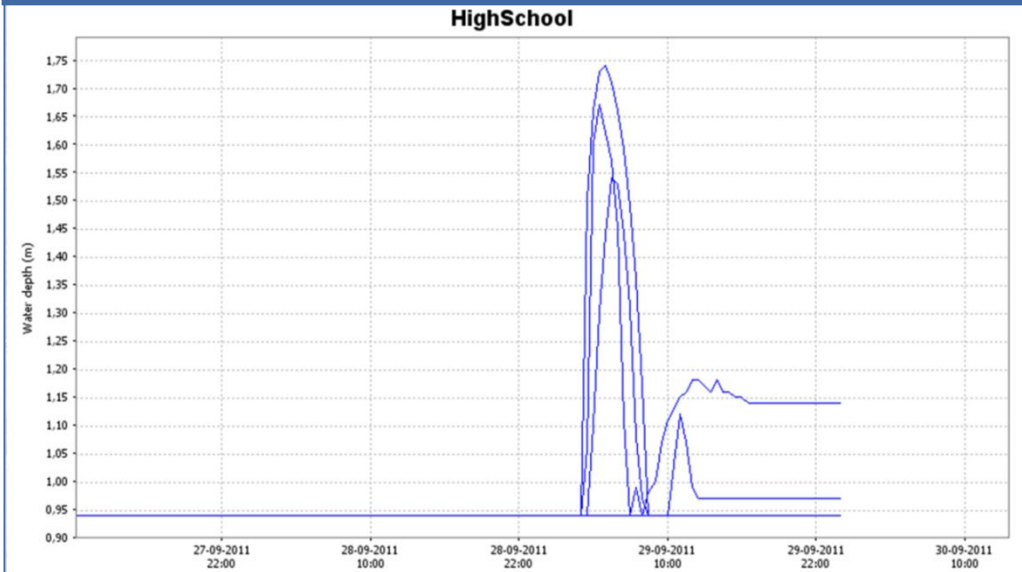

“How bad is it?”

Headmaster

“What is the worst case for my school in the upcoming three days?”
“How bad is it?”

System output: Water Level from ensemble members

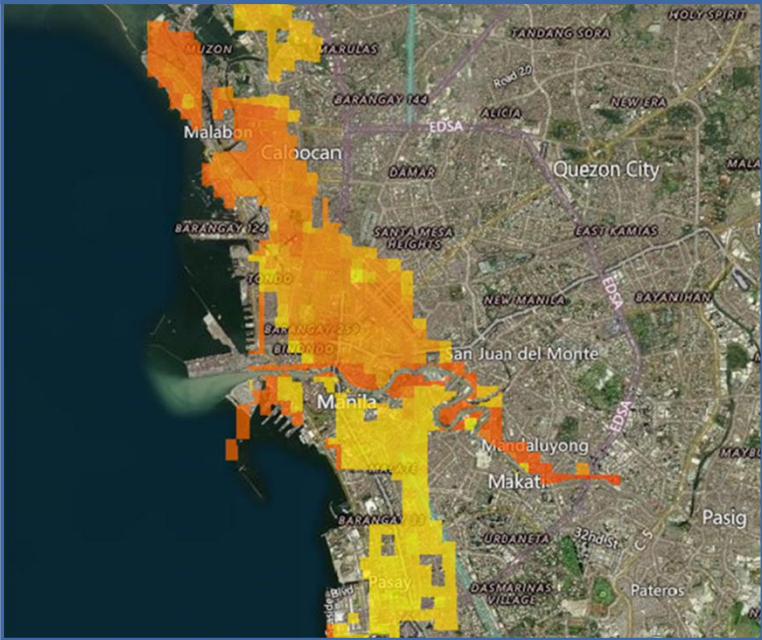

Water depth for every ensemble member, with peaks for ensemble member 8,9, 10 at 29.09.2011 06:00:00 GMT.

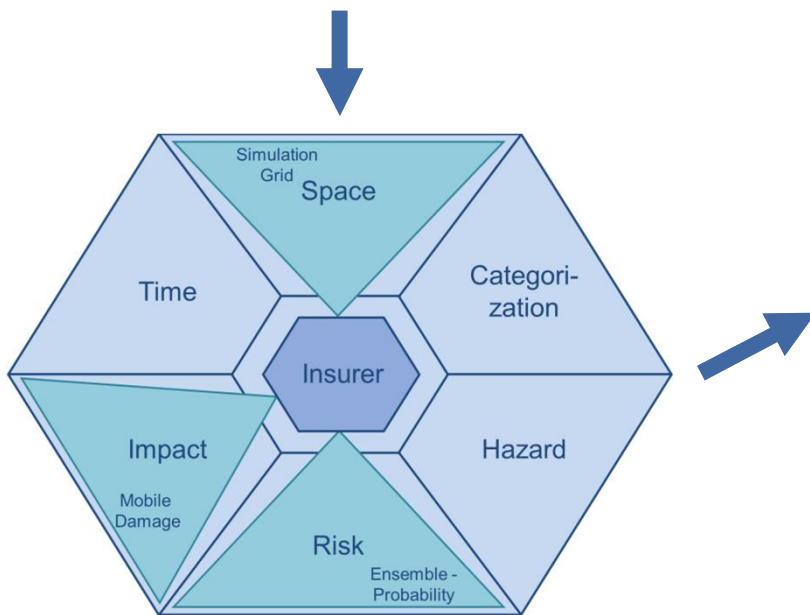

Insurer

“What probable damage is expected for different areas?”

**System Output:
Mobile damage risk sum**

Manila Bay, Spatial distribution of the damage risk sum

Deltares

I. Introduction:

Chronic of Forecast

II. Methodology:

Risk-based Forecast System Manila

III. Results & Conclusion:

Understanding of Flood Forecast

Deltares

1. **Supporting** decision makers with a **new dimension** in forecast mode:
risk = impact x probability
2. The application of a model in forecast mode requires good **interaction** of **modelers** and **forecasters**.
3. Everybody can be a decision maker and dependent on different type of information from the same source.

Thank you for your interest!

What should happen with this system? Outlook

AN INITIATIVE OF
THE NETHERLANDS
RED CROSS

MSc project

Combination of humanitarian impact data and operational hazard forecast

Deltares

Deltares is an independent institute for applied research in the field of water and subsurface with several areas of expertise. In the fields of numerical simulation applications are pushed forward to operationally forecast water scarcity, impurities or floodings (e.g. GLOSSIS). To further develop these applications Deltares collaborates with numerous institutions to actively steer these systems. One direction points towards the support of humanitarian aid work and civil protection.

View on part on the grid of the Operational Global Flood Forecast System (www.globalfloodforecast.com)

Screenshot from the Philippines in 510's dashboard. (www.dashboard.510.global)

510 Global

Is an initiative of the Netherlands red cross, which aims to shape the future of humanitarian aid by converting data into understanding, and put it in the hands of humanitarian relief workers, decision makers and people affected, so that they can better prepare for and cope with disasters and crises

MSc project description.

Deltares capacity to build-up model based forecast information and 510 Globals
