Table 2: Measurement characteristics of the bulk XRD analysis.

Parameter	Value
Analysis	Bulk XRD analysis
Sample preparation	Automated wet milling in alcohol and specific pretreatment to avoid preferred orientation
Diffractometer	Bruker D8 Advance, XE-T detector, Cu-K α radiation
Data treatment methodology	In-house
Interpretation by	Dr. Rieko Adriaens
Date of measurement	13/06/2022
Date of data treatment	30/06/2022
Results	Table 7 and Figure 1

Table 3: Measurement characteristics of the detailed clay analysis by XRD.

Parameter	Value
Analysis	Clay extraction + XRD analysis
Sample preparation	Chemical pretreatment to remove cementing agents followed by an extraction of the <2 μ m fraction by sequential centrifugation.
Diffractometer	Bruker D8 Advance, XE-T detector, Cu-K α radiation
Data treatment methodology	In-house
Interpretation by	Dr. Rieko Adriaens
Date of measurement	20/05/2022-30/05/2022
Date of data treatment	30/06/2022
Results	Table 7 and Figures 2-7

Table 4: Measurement characteristics of the BET analysis.

Parameter	Value
Analysis	Multiple point BET
Instrument	Quantachrome Autosorb
Date of analysis	25/05/2022-11/07/2022
Operator	A.A.
Sample preparation	Outgassing for 2h in 200°C under high-vaccum
Adsorptive-gas	N ₂
Temperature during analysis	77.35K (liquid nitrogen)
Results	Table 8

Table 5: Exchangeable cations composition.

Parameter	Value
Analysis	Chemical analysis of exchangeable cations
Sample preparation	Extraction of the <2µm fraction by sequential centrifugation.
Diffractometer	Bruker D8 Advance, XE-T detector, Cu-Kα radiation
Data treatment methodology	In-house
Interpretation by	Dr. Rieko Adriaens
Date of measurement	24/05/2022-30/05/2022
Date of data treatment	02/07/2022
Results	Table 9
