Status 2022

The German water sector – key facts (status 2019)

Almost full implementation of EU-UWWTD since the late 1990s

- 97% connection rate of public WWTPs
- 8,891 public WWTP – 98% advanced nutrient removal
- 9.05 bill. m³ annual wastewater volume

UBA, 2019

Übersicht über die Größenklassenverteilung der öffentlichen Kläranlagen in Deutschland

Größenklasse	Ausbaugröße (EW)	Anzahl	Anlagenkapazität (EW)	Anteil (%)
5	>100.000	230	74.450.000	49,6
4	10.001 – 100.000	1.888	61.070.000	40,7
4 (teilw.)	80.001 – 100.000	97	9.059.000	6,0
4 (teilw.)	50.001 – 80.000	198	13.122.000	8,7
4 (teilw.)	10.001 – 50.000	1.593	38.893.000	26,0
3,2,1	≤ 10.000	7.473	14.585.000	9,7

Revision of the EU-UWWTD – finally

A success story and a new milestone for water protection

Adaption of the legal framework

- Removal of nutrients (3rd treatment step)
- Removal of micropollutants (4th treatment)
- Extended Producer Responsibility (EPR)
- *Energy neutrality, Management plans, ...*

Impacts on the German water sector

- 3,380 → 4,700 WWTPs covered by UWWTD
- 690 WWTPs with 4th treatment
- Federal Ministry of Environment is in charge.
- Scope for federal states?

Advanced micropollutant removal in Germany

70 WWTPs in operation

Technology-open and voluntary

- NRW and Baden-Württemberg as First Mover
- NRW included the 4th treatment in the WFD management plan
- Full- and partial treatment

UWWTD is expected to support the standardization

DWA coordinates the technical activities of the water sector

- Participation in the Stakeholder dialogue on micropollutants
- Support of the Dialogue process on the National Water Strategy
- Integration in the work on technical rules and regulations

Technology-open approach for the 4th treatment

Complex definition of the treatment efficiency

Category 1

Category 2

Financing of micropollutant removal

Extended Producer Responsibility (EPR)

Introduction of the polluter-pays-principle

- Cost coverage of the by manufacturers of (human) pharmaceuticals and personal care products
- At least 80% of the costs (investment and operating costs)
- Costs of existing plants should be included (First mover)

Implementation of EPR is still open

- Implementation within 3 years seems ambitious.
- Many questions (e.g. only 26% of the API are produced in the EU)
- Established dialogue processes are a platform for the responsible parties

Emschergenossenschaft
Lippeverband

Findings and questions from an operator's perspective

Findings after 20 years of development on micropollutant removal

- Successful integration of advanced techniques in full-scale WWTPs
- Different efficiency of the technologies (profound assessment only with legal requirements)
- Conflict of objectives (energy demand, carbon footprint, footprint)
- Positive effects on water quality and ecology

Open questions for the implementation into German legislation

- 1:1 or more ambitious? Flexibility for federal states?
 - Monitoring approach for N and P?
 - Implementation of the EPR (First Mover included?)
- Pragmatism, a sense of proportion and learning from other countries
