App - Admin Web User Interface	<a href="#">FEWS-8237</a>				
App - Admin Web User Interface	<a href="#">FEWS-7866</a>	Fix indentation of ScheduledTasks.xml included in collected log files	Fix indentation of ScheduledTasks.xml included in collected log files		
App - Admin Web User Interface	<a href="#">FEWS-7624</a>	Workflow-FSS mappings included as csv in Collected Logs via Admin Interface. Only mappings from "local" MC are included.	Workflow-FSS mappings included as csv in Collected Logs via Admin Interface		
App - Admin Web User Interface	<a href="#">FEWS-7610</a>		Sorting functionality on several columns in the Admin interfaces that was missing has been added.		
App - Configuration Manager Gui, System	<a href="#">FEWS-7867</a>	New map layers imported by the ConfigManager are now stored compressed in the database. In case an uncompressed version of a config file was already present, no new version will be generated. This way the configuration in the local datastore can remain smaller. Map layer files that were already compressed as determined by their extension are not compressed twice. The ConfigManager decompresses the compressed files again when exporting them to the file system.	New Map layers imported by the ConfigManagers are now stored compressed in the database.		
App - Configuration Manager Gui	<a href="#">FEWS-7519</a>	Firstly, export by the ConfigManager and OC will make that the timestamp of related shape files on disk produced by config exports will have a corresponding timestamp. Secondly, a popup will be presented when the ConfigManager detects that the timestamps of the shape files that should match are not equal before importing them. The user should start the OC standalone with a local config and open the spatial display which will regenerate the properly corresponding shape files, which can then be imported by the ConfigManager for upload. Within the standalone OC for all layers the sll/dbz files should be regenerated in case of mismatching timestamps.	Functionality was added to prevent the ConfigManager from uploading inconsistent shp/sll or dbt/dbz files.		
App - Data Import Module (DIM)	<a href="#">FEWS-8000</a>	<p>Import type MeiClimateIndex</p> <p>-----</p> <p>MeiClimateIndex imports MEI climate indices from website or from same file in import folder.</p> <p>Data block with climate indices starts with this header line: YEAR DECJAN JANFEB FEBMAR MARAPR APRMAY MAYJUN JUNJUL JULAUG AUGSEP SEPOCT OCTNOV NOVDEC</p> <p>The keywords in the header line are separated with blanks This line is followed by one or more data lines, each with a year and 12 indices for 12 months. Values in data line are separated with Tabs and are stored as 01-01-&lt;year&gt; for DECJAN, as 01-02-&lt;year&gt; for JANFEB , etc. Missing values should be specified with -999.99.</p> <p>Data block may be preceded and/or followed by any other lines. The reader uses header line keywords to identify the beginning of data block, and reads the data lines as long as there is a valid year identification at the beginning of the line.</p>	Import type MeiClimateIndex to import MEI climate indices from website or from same file in import folder	<p>Example for reading from website:</p> <pre> .&lt;br&gt; &lt;import&gt; &lt;general&gt; &lt;importType&gt;MeiClimateIndex&lt;/importType&gt; &lt;serverUrl&gt;http://www.esrl.noaa.gov/psd/enso/mei/table.html&lt;/serverUrl&gt; ..... {code}  Example for reading from import folder: . &lt;import&gt; &lt;general&gt; &lt;importType&gt;MeiClimateIndex&lt;/importType&gt; &lt;folder&gt;\${IMPORT_FOLDER}/mei/table.html&lt;/folder&gt; ..... {code} </pre>

Plugin - Gui - Grid Display	<a href="#">FEWS-7955</a>	In case of vertical (left or right) legend the unit is placed at the legend bottom. In case of horizontal (top or bottom) legend the unit is placed along the axis.	GridDisplay: displaying unit in paint scale legend		
Plugin - Gui - Grid Display	<a href="#">FEWS-7467</a>	In the grid display click the toggle button to switch on/off the spatial thumbnails panel. In the previous version of Delft-FEWS (2012.01), this panel was only visible when configured. Now for each given grid plot it is possible to configure whether the grid display should or should not show the spatial thumbnails panel at the moment that the user selects the given grid plot in the grid display. After the user has selected a grid plot, the user can switch on/off the spatial thumbnails panel for that grid plot manually, using the toggle button in the grid display.  Backwards compatibility: In the previous version of Delft-FEWS (2012.01), this spatial thumbnails panel was only visible when the option numberOfRecentForecasts was present in the grid display configuration. Now this is controlled by the option showThumbnailsPanel. To keep the behaviour the same, in the grid display configuration need to add <showThumbnailsPanel>true</showThumbnailsPanel> for each grid plot that already has a numberOfRecentForecasts configured. E.g.: <showThumbnailsPanel>true</showThumbnailsPanel> <numberOfRecentForecasts>3</numberOfRecentForecasts>	New toggle button to switch on/off the spatial thumbnails panel in the grid display	In GridDisplay config file configure the following option set to true to make the thumbnails panel visible initially (has to be done for each gridPlot individually): {code} <showThumbnailsPanel>true</showThumbnailsPanel> {code}  Optionally configure the number of recent forecasts that should be shown when the spatial thumbnails panel is visible, as follows (default is 1, this option has no effect for historical data): {code} <numberOfRecentForecasts>3</numberOfRecentForecasts> {code}  Optionally configure the gap between thumbnails that is used when the spatial thumbnails panel is visible, as follows (default is 1). {code} <gapBetweenThumbnails>3</gapBetweenThumbnails> {code}

Plugin - Gui - Grid Display	<a href="#">FEWS-7440</a>	<p>The MergeSimple and AccumulationSumInterval transformations work for grids. Only the profileTimeSeries transformation does not work for grids.</p> <p>In this case the profileTimeSeries transformation is used to create a time series with only zeros during the season December-March, which is merged with the data in a data hierarchy, so that the data becomes zero during the season December-March. This was done because the users in this case only want to see the data from the season April-November (hydrological season).</p> <p>Instead of taking all data and removing the data from the season December-March, it would be simpler to make sure that there is only data available for the season April-November in the first place. This can be done using a seasonal periodTransformation of type userSimple that copies the data to the displayed time series for the season April-November and writes zero or missing values for the season December-March. This way the profileTimeSeries transformation is no longer needed, therefore it should also work for grids.</p>	Config problem that was solved by using a seasonal userSimple transformation instead of a mergeSimple in combination with a profileTimeSeries transformation.

Plugin - Module - Data Import	<a href="#">FEWS-7870</a>	Toevoegen mogelijkheid om waardebepalingsmethode te mappen naar interne qualifier.	Uitbreiding umaquo qualifier mappings	volgt nog (in het Engels!!)	
Plugin - Module - Data Import	<a href="#">FEWS-6199</a>	<p>It often happens that on an OPeNDAP server there is data available for multiple forecasts with different forecast times. If the time periods of the forecasts overlap, then only one of the forecasts can be imported at a time. If there is a separate file for each forecast, then this can be done by specifying the URL of the required file in the import configuration. However, when such data is imported in an operational system, then the import URL should be changed each time a new forecast becomes available on the OPeNDAP server. If the URLs for the different forecasts contain the forecast time and only differ in forecast time, then the tags TIME_ZERO and/or RELATIVE_TIME_IN_SECONDS can be used to solve this problem. The import will replace any TIME_ZERO tags in the URL with the time zero (forecast time) of the current import run. Any RELATIVE_TIME_IN_SECONDS tags in the URL will be replaced with a time that equals (time0 + relativeTime), where time0 is the time zero (forecast time) of the current import run and relativeTime (specified in the tag) is a time relative to time0 in seconds (can be negative). The time is formatted using the date format yyyyMMdd.</p> <p>Note: If the import runs for a time zero for which there is no forecast available, the import will fail.</p> <p>See documentation on wiki pages:  <a href="http://publicwiki.deltares.nl/display/FEWSDOC/Import+Module+Data">http://publicwiki.deltares.nl/display/FEWSDOC/Import+Module+Data</a>  <a href="http://publicwiki.deltares.nl/display/FEWSDOC/Import+data+using+OPeNDAP">http://publicwiki.deltares.nl/display/FEWSDOC/Import+data+using+OPeNDAP</a></p>	In netcdf import from opendap added an option to import data for a given forecast time	<pre>{code:xml} &lt;timeSeriesImportRun xmlns="http://www.wldelft.nl/fews" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="http://www.wldelft.nl/fews http://fews.wldelft.nl/schemas/version1.0/timeSeriesImportRun.xsd"&gt; &lt;import&gt; &lt;general&gt; &lt;importType&gt;NETCDF-CF_GRID&lt;/importType&gt; &lt;serverUrl&gt;http://nomads.ncep.noaa.gov:9090/dods/gfs/gfs%TIME_ZERO(yyyyMMdd)%/gfs_%TIME_ZERO(HH)%z&lt;/serverUrl&gt; &lt;idMapId&gt;NetcdfGridImportFromUrlWithTimeZeroTagsTest8IdMap&lt;/idMapId&gt; &lt;/general&gt; &lt;timeSeriesSet&gt; &lt;moduleInstanceId&gt;NetcdfGridImportFromUrlWithTimeZeroTagsTest8&lt;/moduleInstanceId&gt; &lt;valueType&gt;grid&lt;/valueType&gt; &lt;parameterId&gt;Pressure.msl&lt;/parameterId&gt; &lt;locationId&gt;netcdfGridLocation8&lt;/locationId&gt; &lt;timeSeriesType&gt;external forecasting&lt;/timeSeriesType&gt; &lt;timeStep unit="hour" multiplier="3"/&gt; &lt;readWriteMode&gt;add originals&lt;/readWriteMode&gt; &lt;/timeSeriesSet&gt; &lt;/import&gt; &lt;/timeSeriesImportRun&gt; {code}</pre> <pre>{code:xml} &lt;timeSeriesImportRun xmlns="http://www.wldelft.nl/fews" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="http://www.wldelft.nl/fews http://fews.wldelft.nl/schemas/version1.0/timeSeriesImportRun.xsd"&gt; &lt;import&gt; &lt;general&gt; &lt;importType&gt;NETCDF-CF_GRID&lt;/importType&gt; &lt;serverUrl&gt;http://nomads.ncep.noaa.gov:9090/dods/gfs/gfs%RELATIVE_TIME_IN_SECONDS(yyyyMMdd, -18000 )%/gfs_%RELATIVE_TIME_IN_SECONDS(yyyyMMdd, -18000 )%z&lt;/serverUrl&gt; &lt;idMapId&gt;NetcdfGridImportFromUrlWithTimeZeroTagsTest8IdMap&lt;/idMapId&gt; &lt;/general&gt; &lt;timeSeriesSet&gt; &lt;moduleInstanceId&gt;NetcdfGridImportFromUrlWithTimeZeroTagsTest8&lt;/moduleInstanceId&gt; &lt;valueType&gt;grid&lt;/valueType&gt; &lt;parameterId&gt;Pressure.msl&lt;/parameterId&gt; &lt;locationId&gt;netcdfGridLocation8&lt;/locationId&gt; &lt;timeSeriesType&gt;external forecasting&lt;/timeSeriesType&gt; &lt;timeStep unit="hour" multiplier="3"/&gt; &lt;readWriteMode&gt;add originals&lt;/readWriteMode&gt; &lt;/timeSeriesSet&gt; &lt;/import&gt; &lt;/timeSeriesImportRun&gt; {code}</pre>	
Plugin - Module - Error Correction	<a href="#">FEWS-7657</a>				

Component/s	Key	Release Note Text Description	Release Note Text	Config Example	Images
Plugin - Module - General Adapter	<a href="#">FEWS-7816</a>	The local datastore is now protected against badly written adapters that generate too many error and warning messages that are sent to the database via the General Adapter. If there are more than 100 error messages or more than 200 warnings or more than 10000 info messages are generated, a warning is issued about that the adapter might be badly written. Also after 200 warnings and 100 error messages, the messages will only log locally and no longer to the database.	The local datastore is now protected against badly written adapters of the General Adapter that generate too many log and warning messages that are sent to the database.		
Plugin - Module - Modifiers (TimeSeries)	<a href="#">FEWS-6709</a>	Previously it was possible to connect a displaygroup to the topology by added a nodeId to the displaygroup. Now it is possible to connect 1 or more displaysgroup to a node in the topology by configuring 1 or more displayGroupId in the topology.	It now possible to refer to multiple displaygroups from the topology	<pre>{code:xml} &lt;nodes id="qualitycontrol" name="Quality Control"&gt; &lt;nodes id="QC_snotel" name="QC Snow"&gt; &lt;node id="Preprocess_QC_SNWE" name="Preprocess SNWE"&gt;  &lt;workflowId&gt;Preprocess_QC_SNWE&lt;/workflowId&gt; &lt;displayGroupId&gt;snowplots&lt;/displayGroupId&gt; &lt;displayGroupId&gt;rainfallplots&lt;/displayGroupId&gt; &lt;/node&gt; {code}</pre>	
Plugin - Module - Reports	<a href="#">FEWS-8123</a>	<p>Reports: rowPerLocationHtmlTable</p> <p>This table is a generic table type and contains for each configured location one row with several columns. The data displayed in a particular column are result of the function that is configured for that column.</p> <p>For each column the following elements can be configured:</p> <ul style="list-style-type: none"> <li>- header : text to display in the column header,</li> <li>- format: format to use for this column. It refers to the styles that are available in the html template file</li> <li>- width: width of the column</li> <li>- function: function that determines/computes the value displayed in the column.</li> </ul> <p>The functions</p> <p>The existing report functions, that are also used in html-templates, can be configured in the columns.</p> <p>For example MAXVALUE(variableId; numberFormat) or LASTVALUETIME(variableId; dateFormat).</p> <p>Furthermore the following functions are available:</p> <ol style="list-style-type: none"> <li>1. LOCATIONATTRIBUTE(attribute; &lt;variableId&gt;; &lt;format&gt;)</li> </ol> <p>Argument attribute refers to the location attributes. The attributes differ per region.</p> <p>The other arguments are optional. For example, use argument 'f'.</p> <p>There are 3 attributes with a fix name: id, name and shortname. The attributes are not case sensitive.</p> <ol style="list-style-type: none"> <li>2. PARAMETERATTRIBUTE(attribute; variableId; &lt;format&gt;)</li> </ol> <p>Argument attribute refers to the parameter attributes. The attribute format is optional. For example, use argument 'fo'.</p>	New HTML report type 'rowPerLocationHtmlTable'	<p>The rowPerLocationHtmlTable can be configured directly in &lt;report&gt; section, or in the &lt;declarations&gt; section and referred from the &lt;report&gt; section.</p> <p>Example of the configuration in &lt;report&gt; section:</p> <pre>{code:xml} &lt;report&gt;  &lt;locationSetId&gt;AllLocations&lt;/locationSetId&gt;  &lt;rowPerLocationHtmlTable id="tableA" tableStyle="tableStyle3" &gt;  &lt;column&gt; &lt;header&gt;Locatie id&lt;/header&gt; &lt;format&gt;_data&lt;/format&gt; &lt;function&gt;LOCATIONATTRIBUTE(id)&lt;/function&gt; &lt;/column&gt;  &lt;column&gt; &lt;header&gt;Locatie name&lt;/header&gt; &lt;format&gt;_data&lt;/format&gt; &lt;width&gt;200&lt;/width&gt; &lt;function&gt;LOCATIONATTRIBUTE(name)&lt;/function&gt; &lt;/column&gt;  &lt;column&gt; &lt;header&gt;Eenheid&lt;/header&gt; &lt;format&gt;_data&lt;/format&gt; &lt;function&gt;PARAMETERATTRIBUTE(UNIT;Qobserved)&lt;/function&gt; &lt;/column&gt;  &lt;column&gt; &lt;header&gt;Datum le overschreiding&lt;/header&gt; &lt;format&gt;_data&lt;/format&gt; &lt;function&gt;THRESHOLDCROSSING(FIRST_DATE;Qobserved;dateFormatThreshold)&lt;/function&gt; &lt;/column&gt;</pre>

Plugin - Module - Transformation	<a href="#">FEWS-6381</a>	The jackknife method is an alternative method for calculating the rmse in the pca-analysis function. When the pca is applied to a set of data for lets say 10 years than the calculation method will be as follows. First the best equation is found when the first year is left out of the dataset. With this equation an estimate is made for that year by using the observed data for that year. Same procedure is done for the other years. At the end of the procedure for all years an estimate is available. The rmse is calculated from these estimates. The equation which will be used as the best equation is the one which found by using all years.	PCA Function in the transformation module and in statistical functions library is extended with the JackKnife method	<pre> &lt;code&gt;xml //config example timeseriesdialog.xml &lt;/statisticalFunction&gt; &lt;statisticalFunction function="principalcomponentanalysisJackKnife"&gt; &lt;observedParameterId&gt;SNWE&lt;/observedParameterId&gt; &lt;simulatedParameterId&gt;SWE&lt;/simulatedParameterId&gt; &lt;/statisticalFunction&gt;  //config example transformation &lt;transformation id="PCAFunction"&gt; &lt;regression&gt; &lt;principalComponentAnalysis&gt; &lt;historicalObserved&gt; &lt;variableId&gt;historicalInputA&lt;/variableId&gt; &lt;/historicalObserved&gt; &lt;historicalObserved&gt; &lt;variableId&gt;historicalInputB&lt;/variableId&gt; &lt;/historicalObserved&gt; &lt;historicalSimulated&gt; &lt;variableId&gt;simulatedHistorical&lt;/variableId&gt; &lt;/historicalSimulated&gt; &lt;currentObserved&gt; &lt;variableId&gt;currentObservedA&lt;/variableId&gt; &lt;/currentObserved&gt; &lt;currentObserved&gt; &lt;variableId&gt;currentObservedB&lt;/variableId&gt; &lt;/currentObserved&gt; &lt;currentSimulated&gt; &lt;variableId&gt;currentSimulated&lt;/variableId&gt; &lt;/currentSimulated&gt; &lt;enableCombinationAnalysis&gt;true&lt;/enableCombinationAnalysis&gt; &lt;rmseCalculationMethod&gt;jackKnife&lt;/rmseCalculationMethod&gt; &lt;estimatedCurrentSimulated&gt; &lt;variableId&gt;estimatedCurrentSimulated&lt;/variableId&gt; &lt;/estimatedCurrentSimulated&gt; &lt;errorStatistics&gt; &lt;variableId&gt;errorStatistics&lt;/variableId&gt; &lt;/errorStatistics&gt; </pre>	
System, System - Synchronisation 2.0	<a href="#">FEWS-7865</a>				
System - Workflow	<a href="#">FEWS-8143</a>	Every loop iteration (ensemble member) should write to output time series not used by other loop iterations at the same time. Prevent loop iterations overwrite each other results. This gives unpredictable result in multi-treading mode. Not ensemble related transformations should be moved outside the loop.	Ensemble loop configuration errors detection	Configuration should be fixed by user when this error appears	
System - Workflow	<a href="#">FEWS-7675</a>	Sometimes a module in FEWS which should run quickly can "hang", e.g. an Import is waiting for some server, blocking the Forecasting Shell from other activities. Whereas the TaskChaser can be used to terminate "hanging" tasks using a global timeout setting, this new optional timeout is configurable in the workflowDescriptor and can be used to terminate a specific FSS task whenever the timeout is exceeded..	The Forecasting Shell has been extended to automatically terminate a taskrun when a timeout that was specified in the workflowDescriptor has been exceeded.	The following section added to the workflowDescriptor enforces that the Forecasting shell taskrun times out after five minutes and is automatically terminated when the timeout is exceeded. This functionality allows for much finer-grained control over termination of tasks in the Forecasting Shell than the MC Chaser, since the chaser has one timeout for all available tasks. <pre> &lt;code&gt;xml &lt;timeout unit="minute" multiplier="5"/&gt; &lt;/code&gt; </pre>	
Utilities	<a href="#">FEWS-7678</a>
