

# agenda

OpenEarth regularly holds *sprintsessions*. These are informal hands-on meetings where we interactively share knowledge, models, ideas and tools. A second goal is to obtain feed-back on the OpenEarth infrastructure. During these sessions we edit the wiki, update stuff into [SubVersion](#), put data into netCDF files and upload to the [OPeNDAP server](#), and PostgreSQL/PostGIS, upload static Google Earth feeds onto [the kml server](#) and configure geoserver to provide live WFS/WMS/KML streams.

Sprint sessions are organized regularly in different frameworks. Because of the open mindset of OpenEarth participants from outside the framework can always join. Feel free to organize a sprintsession yourselves, or ask us to organize one if you can team up say 10 enthusiasts. Our sprintsessions are posted on (i) our [LinkedIn group](#) and (ii) as a [news/blog item](#) on this wiki space. For reference please find below a list of historic sprint sessions.
