

Database proxy - 2022.02 and later

[Http Database Access Proxy requirements](#)

[Database proxy - 2022.01 and before](#)

Optional server for enabling http(s) access to the central database. Typically used in combination with a reverse proxy server. Typically used for connecting Operator Clients to the central database. Never used by the FSS. Sometimes used for ConfigManager / MC-MC synchronisation with external networks.

Minimum requirements

- See [Tomcat requirements](#), +1 GB RAM.
- At least -Xmx1024m
- Load balancers must use sticky sessions.

Support for external authentication (optional for OC / CM, not available for MC-MC synch)

- Open ID Connect (oauth2)
