

# ODK inventartisation form for Android

## Introduction

Open Data Kit (ODK) is a free and open-source set of tools which help organizations author, field, and manage mobile data collection solutions.

## How to create a sample form

Start the development by downloading the [sample\\_xlsform](#). Carefully read the instructions on <https://opendatakit.org/use/xlsform/>.

Once you have created your own form, upload your spreadsheet to [the online converter](#) and save the xml you retrieve on your computer.

## On your phone

On the Google Play Store search for ODK Collect and install.

Connect the phone to your computer and store the collected xml in `./odk/forms` folder on your phone.  
For detailed information on styling and creating the form please check <http://xlsform.org/>.

Collecting data with offline Maps? Please check the webpage of [GeoODK](#). It is still a beta, but looking promising.
