

# MeteoAlarmCap

- [Introduction](#)
- [MeteoAlarmCap Export Configuration](#)
  - [Exporting Updates and Cancels](#)
    - [overrulingIdentifierElement](#)

## Introduction

MeteoAlarmCap is a XML export format following the Common Alerting Protocol standard: <http://docs.oasis-open.org/emergency/cap/v1.2/CAP-v1.2-os.html> . The export is used for <http://www.rijkswaterstaat.nl/kaarten/waterstand-tov-nap.aspx>.

## MeteoAlarmCap Export Configuration

The configuration of the MeteoAlarmCap export module is shown in the following example.

The following are the required properties that have to be configured:

- `meteo-alarm-soap-service` : the url of the soap service to post the cap files to. For example: <http://www.meteoalarm.eu:8080/functions/webservices/capimport.php?wsdl>
- `dolibarrkey`: key needed by the soap service
- `username`: username needed by the soap service
- `password`: password needed by the soap service
- `area-code`

The area code is one of the following codes that should be available as `externalLocationId` in the `idMap` (only one code is required if a `locationset` is configured in the `timeseriesset`):

- "GR" (Groningen)
- "FL" (Flevoland)
- "ZH" (Zuid-Holland)
- "ZE" (Zeeland)
- "NH" (Noord-Holland)
- "LB" (Limburg)
- "NB" (Noord-Brabant)
- "GL" (Gelderland)
- "UT" (Utrecht)
- "OV" (Overijssel)
- "FR" (Friesland)
- "DR" (Drenthe)
- "WAE" (Waddeneilanden)
- "WAD" (Waddenzee)
- "IJG" (IJsselmeergebied)

The following properties are optional and can be used to change the default values. The default values are given:

- `"status"` : "Test"
- `"source"` : "KNMI"
- `"scope"` : "Public"
- `"certainty"` : "Likely"
- `"category"` : "Met"
- `"sender"` : "<http://www.knmi.nl/nederland-nu/weer/waarschuwingen>"
- `"sender-name"` : "KNMI Koninklijk Nederlands Meteorologisch Instituut"
- `"contact"` : "informatiecentrum@[knmi.nl](http://www.knmi.nl)"
- `"urgency"` : "Future"
- `"awareness-type"` : "12"
  - The following awareness-types are supported:
    - "00" : "1; wind"
    - "01" : "10; rain";
    - "02": "2; snow-ice"
    - "03" : "3; thunderstorm"
    - "07" : "4; fog"
    - "12" : "12; flooding"
    - "16" : "5; high-temperature"
    - "17" : "6; low-temperature"

For exporting description and instruction the MeteoalarmCap export relies on location attributes.

```

<locationSet id="meteoalarm">
  <csvFile>
    <file>meteoalarm</file>
    <geoDatum>WGS 1984</geoDatum>
    <id>%ID%</id>
    <name>%NAME%</name>
    <x>%X%</x>
    <y>%Y%</y>
    <attribute id="Green_DES_NL">
      <text>%Green_DES_NL%</text>
    </attribute>
    <attribute id="Green_DES_EN">
      <text>%Green_DES_EN%</text>
    </attribute>
    <attribute id="Green_INS_NL">
      <text>%Green_INS_NL%</text>
    </attribute>
    <attribute id="Green_INS_EN">
      <text>%Green_INS_EN%</text>
    </attribute>

    <attribute id="Yellow_DES_NL">
      <text>%Yellow_DES_NL%</text>
    </attribute>
    <attribute id="Yellow_DES_EN">
      <text>%Yellow_DES_EN%</text>
    </attribute>
    <attribute id="Yellow_INS_NL">
      <text>%Yellow_INS_NL%</text>
    </attribute>
    <attribute id="Yellow_INS_EN">
      <text>%Yellow_INS_EN%</text>
    </attribute>

    <attribute id="Orange_DES_NL">
      <text>%Orange_DES_NL%</text>
    </attribute>
    <attribute id="Orange_DES_EN">
      <text>%Orange_DES_EN%</text>
    </attribute>
    <attribute id="Orange_INS_NL">
      <text>%Orange_INS_NL%</text>
    </attribute>
    <attribute id="Orange_INS_EN">
      <text>%Orange_INS_EN%</text>
    </attribute>

    <attribute id="Red_DES_NL">
      <text>%Red_DES_NL%</text>
    </attribute>
    <attribute id="Red_DES_EN">
      <text>%Red_DES_EN%</text>
    </attribute>
    <attribute id="Red_INS_NL">
      <text>%Red_INS_NL%</text>
    </attribute>
    <attribute id="Red_INS_EN">
      <text>%Red_INS_EN%</text>
    </attribute>

  </csvFile>
</locationSet>

```

The csv file might look as follows:

```
ID;NAME;X;Y;REL_LOBITH;REL_EIJSDEN;Green_DES_NL;Green_INS_NL;Green_DES_EN;Green_INS_EN;Yellow_DES_NL;
Yellow_INS_NL;Yellow_DES_EN;Yellow_INS_EN;Orange_DES_NL;Orange_INS_NL;Orange_DES_EN;Orange_INS_EN;Red_DES_NL;
Red_INS_NL;Red_DES_EN;Red_INS_EN
DR;Drenthe;6.55;52.98;FALSE;FALSE;Alles is normaal;Niets doen;Everything is normal;Do nothing;Not so fine;Check
website;Not so fine;Check website;Be careful;Ready for packing;Be careful;Ready for packing;We are in danger;
Run;We are in danger;Run
FL;Flevoland;5.47;52.5;FALSE;FALSE;Alles is normaal;Niets doen;Everything is normal;Do nothing;Not so fine;
Check website;Not so fine;Check website;Be careful;Ready for packing;Be careful;Ready for packing;We are in
danger;Run;We are in danger;Run
```

As MeteoAlarmCap can generate multiple CAP files per forecast, 'exportFileName' create a folder that includes all exported CAP files. 'exportFileName' should be different for each export (e.g. each RWSoS system).

meteo-alarm-soap-service - contains the url where the request should be sent. Compulsory field.

username, password and tokenUrl are necessary fields to access an authorisation token.

```

<?xml version="1.0" encoding="UTF-8"?>

  </info>
</alert>
```

## Exporting Updates and Cancels

When it is desired to update existing alerts instead of adding new ones a "feedsUri" property can be configured:

```
<string key="feedsUri" value="https://feeds-test.meteoalarm.org/feeds/meteoalarm-legacy-atom-netherlands"/>
```

The export will read from this url what the existing alerts are and compare them with the data for the export.

When there is data for a non existing alert, a new alert will be exported.

When there is different data for an existing alert and update will be send.

## overrulingIdentifierElement

Because during development there have been differences detected between the production and test server an overrulingIdentifierElement property has been introduced which functions as a signal that some information needs to be taken from different elements or slightly corrected. So for the export to the test server the <string key="overrulingIdentifierElement" value="id"/> needs to be configured, for the production server this property should not be present.
