

Statistics Same Attribute Value

The transformations from this group connect input and output time series based on a configurable attribute.

The data written to the output series will be based on all input time series that have the exact same value for the configured attribute as the output.

The next basic statistics are available in separate transformations:

count
kurtosis
max
mean
median
min
percentileExceedence
percentileNonExceedence
quartile
rootMeanSquareError
rsquared
skewness
standardDeviation
sum
variance

A more specific transformation is:

[Count Threshold Crossings](#)
