

# 19 Module Run Table Display

## Overview

The Module Run Table Display (available since 2015.01) can show data imported using the importCsvModuleRunTablesActivity of the [05 General Adapter Module](#). The imported CSV files are stored in FEWS and can be displayed using a table viewer with sorting, filtering and column hiding functionality.

## Configuration

To use the Module Run Table Display viewer, configure it as <explorerTask> in Explorer.xml. For example:

```
<explorerTask name="Module Run Table Display">
    <mnemonic>T</mnemonic>
    <displayConfigFileName>ModuleRunTableDisplay</displayConfigFileName>
    <toolbarTask>true</toolbarTask>
    <menubarTask>true</menubarTask>
    <accelerator>ctrl T</accelerator>
    <toolWindow>false</toolWindow>
    <loadAtStartup>true</loadAtStartup>
    <onFailWarnAndContinue>false</onFailWarnAndContinue>
</explorerTask>
```

In the DisplayConfigFiles directory a ModuleRunTableDisplay.xml file needs to be created:

```
<?xml version="1.0" encoding="UTF-8"?>
<moduleRunTableDisplay xmlns="http://www.wldelft.nl/fews"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xsi:schemaLocation="http://www.wldelft.nl/fews https://fewsdocs.deltares.nl/schemas/version1.0
    /moduleRunTableDisplay.xsd"/>
```

## Displaying Content

To display the data a topology node has to be selected that maps to the run that imports the csv. After selecting the node the Module Run Table Display will appear. On top of the display is a list with csv files that have been selected. Default the first file will be displayed. Clicking on any file will display the imported csv content.

## Filtering

Tables can be filtered by double clicking on a cell entry. Only records with the same entry for the selected column will be displayed. The selected entry will be highlighted (blue). Double clicking another entry will expand the filter. To undo the filtering the highlighted column has to be double clicked again.

The screenshot shows the BPA-HERMES Data Management Framework interface. The main window displays a table titled "ModuleRunTable Display" with the following columns: Solution #, Priority, Goal, Solution Index, Solution Type, Objective, Iteration, Statement ID, # Frozen Constraints, # Frozen Variables, Priority2, and Goal2. The table contains 60 rows, each representing a solution with a priority of 20 and a goal of "Trib Minimum Flows". The first row (Solution # 22) is highlighted in blue, indicating it is the current filter selection. The "Iteration" column shows values ranging from 1 to 11, with most entries being 10 or 11. The "Statement ID" column shows values such as 1|20.1.1, 2|20.1.1, etc. The "Frozen" columns show counts of 2 for constraints and 0 for variables. The "Priority2" and "Goal2" columns are both 0. At the bottom of the table, a status bar indicates "26 of 11953 rows".

## Column hiding

In case not all columns should be visible, right clicking on a value will show the "Set column visibility" menu. This allows a user to select or deselect columns that should be visible (at least one column has to remain visible). These settings will be stored in the user settings and will remain available after FEWS was restarted.

## On fail configuration

Since 2019.02.

By design the activity will fail if the configured importFile is not found. To overrule this behaviour the following configuration option is available:

```
<onFailWarnAndContinue>true</onFailWarnAndContinue>
```

If onFailWarnAndContinue has been set to true, a warning will be logged if the configured importFile cannot be found, but the activity won't fail.
