

Aim

All activities aim at knowledge creation and transfer, and can be grouped into three broad categories:

1. **Network development activities**

A key goal is to facilitate the creation of a sustainable network of experts. Interactions, communications, coordination and meetings are all considered key deliverables.

2. **Tangible research products**

The network is expected to compile, integrate and transfer relevant knowledge among others through the production of working papers, publishing articles in relevant journals, conference proceedings, proposals and innovative research projects.

3. **Meetings and activities**

All institutions participate in progress meetings and thematic workshops twice a year and, host one progress meeting or thematic workshop during the three year period. In addition, as opportunities present themselves, partners are expected to share experiences gained from observations of actual events and exercises.
