3.1 Development model

3.2 Use cases

[GOTO use cases](#)

3.3 OpenMI 2.0 architecture

3.4 Development and release roadmap

4. OpenMI Java and OpenMI .net synchronization

5. OATC Procedures

Review and update the OATC procedures ([GOTO OATC procedures](#))

6. OpenMI WIKI

www.OpenMI.org

Comment to the www.OpenMI.org

- All over impression is that the web site has improved a lot and looks very fine.
- We are also very pleased about the latest news letter.

Specific comment:

- The company logo's are a bit too dominant, should stay at the front page, but should be moved to the bottom.
- The News are considered very important. We have to make sure that it is updated.
- Demo video, we should consider making some demo videos. .
- The Contacts page should be completed very soon (seems very important that there is a contact on the contact page).
- Case important, should be easy to find. For inspiration please look: <http://www.wallingfordsoftware.com/casestudies/showcase.asp>
- What is available for members specifically?
- We should be careful about the "under development pages". E.g. when you look at the OpenMI standard page, you get the impression that the standard is under development, but is actually the page about the standard that is under development.

7. Miscellaneous issues

8. Tasks and unresolved issues

All tasks and unresolved issues are managed via the sourceForge server: ([GOTO OpenMI tasks on SourceForge](#))

9. Any other business
