

# Standard and Guidelines

The following documents are available for the rapid load test

## A draft Standard for the execution

This document describes the rules to execute a proper rapid test.

It is related to the Eurocodes for Geotechnical testing. The draft version (approved by the Dutch committee CUR-H410 "Rapid Load Testing on Piles") has been submitted to the authorities for formal approval. A draft version can be read in the appendix of the book **Rapid Load Testing on piles** P. Hölscher, A.F. Van Tol, eds. Francis Taylor publisher, September 2008

[More information on this book](#)

Other comparable documents are available in Japan and the USA

## Guidelines for the interpretation of the test results.

These Guidelines were published at the end of 2011 by CRC Press ( [click here](#) to see more information on the Guidelines including the table of contents ). These Guidelines are in english and prepared to be linked with other national codes or application documents then the Dutch ones.
