

EventsDischargeVolume

Information

Transformation:	DischargeVolume
Transformation Group:	Events
Description:	Calculates either the discharge volume of <i>all events</i> initiated in the output period or only the discharge volume of the <i>largest event</i> initiated in the output period. An <i>event</i> in this transformation is defined as a largest possible series of subsequent subevents where the duration of gaps (where there are no subevents) is shorter than the specified maxGapDuration parameter. A <i>subevent</i> is defined as a measurement in time in the input where the value is larger than the specified threshold parameter. The discharge volume of a subevent is calculated by multiplying the input value (m ³ /s) by the duration of the input time step (s). The discharge volume for an event is the sum of the discharge volumes for its subevents, and is registered only in the output period where the event initiated.

Hydrological Information

Purpose and use of Transformation:	This transformation can for instance be used to report discharge volume statistics on sewer spillage for each month.
Background and Exceptions:	The unit of the input must be m ³ /s. The output time step must be bigger than the input time step. All input values must be non-missing, otherwise the result will be set to <i>missing value</i> . In case one of the inputs is doubtful, the output flag is set to ORIGINAL_DOUTBFUL.

Input

discharge Equidistant measurements in m³/s.

Options

eventSelection Selects either discharge volume of all events or only the discharge volume of the event with the largest discharge volume.

threshold Only measurements are used with a value above this value. Default is 0.

maxGapDuration When there is a gap between two subsequent subevents exceeding this duration, these subevents belong to two separate events. Default is 24 hours.

CoefficientSets

No connection to CoefficientSets.

Output

volume Aggregated volume of the selected events in m³.

Configuration Example

Configuration example for discharge volume of events for each month.
