

UM Aquo export

Introduction

The UM Aquo file format is a special XML format to exchange all types of time series data, defined by the Dutch [IDsW](#). In FEWS it can only be used to export sample time series. Currently only the format version of 2009 is supported.

More information on the UM Aquo file format can be found IDsW internet site for UM Aquo:

<http://www.aquo.nl/aquo-standaard/um-aquo/>

The Export module in FEWS exports requires many additional information that should be supplied to the export module by using an idMap. In this idMap the next four external qualifiers should be defined:

1. externalQualifier1 : eenheid
2. externalQualifier2 : hoedanigheid
3. externalQualifier3 : compartiment
4. externalQualifier4 : <landcode>;<waterbeheerderCode>;<waterbeheerder>

All codes are listed in:

- unit / eenheid
 - http://www.aquo.nl/Aquo/schemas/Aquo-domein_eenheid.xsd
- hoedanigheid
 - http://www.aquo.nl/Aquo/schemas/Aquo-domein_hoedanigheid_2009.xsd

Example idMap

Below an example idMap file is listed that is used within the export for timeseries of the waterboard Vallei en Eem in the Netherlands. That is why landcode=NL, waterbeheerderCode=10 and waterbeheerder=Waterschap Vallei en Eem.

```

<idMap xmlns="http://www.wldelft.nl/fews" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:
schemaLocation="http://www.wldelft.nl/fews http://fews.wldelft.nl/schemas/version1.0/idMap.xsd" version="1.1">
  <!--          external: UM Aquo parameter
                internal: FEWS parameter
                externalQualifier1 : eenheid
                externalQualifier2 : hoedanigheid
                externalQualifier3 : compartiment
                externalQualifier4 : landcode;waterbeheerderCode;waterbeheerder

  -->
  <!-- Temperatuur parameters-->
  <parameter external="T;Temperatuur" internal="T_meting_lucht" externalQualifier1="oC;graad Celsius"
