

March 26th - sprintsession at NCK days on zandmotor data

On Wednesday afternoon (13-17h) March 26th, an OpenEarth workshop is organised, as part of the NCK days 2014 at UNESCO-IHE. The theme of this year's session is 'Zandmotor'.

The monitoring data of the Zandmotor is stored at the [3TU datacentrum](http://zandmotordata.nl) in a OpenEarth system (<http://zandmotordata.nl>).

The session will focus on the (newest) technical features of the server system and the actual data access (OPeNDAP and PostGIS/Geoserver) and visualisation. Since the Zandmotor data is not publicly available yet, we will briefly discuss the procedure to get access to the data. We will practice with the same technology, using open data.

The session is organised by Kees den Heijer and Gerben de Boer.

- when: Wednesday March 26th, 2014 13.00-17.00h
- where: UNESCO-IHE, Delft
- sign-up: please register via <http://nckdays2014.eventzilla.net/>
- **!! Bring your own data and laptop !!**
